

## ABSTRACT

An organic electroluminescence element comprising: an anode; a first emitting layer comprising at least a first host material and a first dopant; a second emitting layer comprising at least a second host material and a second dopant; and a cathode in the order mentioned: wherein the energy gap  $E_{gh1}$  of the first host material, the energy gap  $E_{gd1}$  of the first dopant, the energy gap  $E_{gh2}$  of the second host material, and the energy gap  $E_{gd2}$  of the second dopant satisfy the following formulas; and the luminescent intensity  $I1$  at the maximum luminescent wavelength of an emission spectrum derived from the first emitting layer, and the luminescent intensity  $I2$  at the maximum luminescent wavelength of an emission spectrum derived from the second emitting layer satisfy the following formula:

$$E_{gh1} > E_{gd1}$$

$$E_{gh2} > E_{gd2}$$

$$E_{gd1} > E_{gd2}$$

$$I1 > 3.5 \times I2.$$
